

ABSTRACT

The present invention is a method and apparatus for monitoring gambling statistics and for allowing buyers to purchase information pertaining to a specific bidder's choice. The present invention allows a person to anonymously place a bid about a certain game, without exchanging money to play or for wins or losses. The present invention further allows a person to monitor one's personal gambling statistics, such as wins and losses, and anonymously displays these statistics for others to view. When a person reaches a level of achievement, the present invention tenders an offer of payment in exchange for allowing his/her bidding information, such as choice of winner, number of points, etc., to be sold to others. Potential buyers are given the ability to provide payment to view bidding information. The method and apparatus of the present invention have applications on the Internet as well as conventional communication systems such as voice telephone.
